1st planet from the Sun

MERCURY
rock planet

Mercury is the smallest planet in our solar system, only slightly larger than the Earth's moon.

2nd planet from the Sun

VENUS
rock planet

Venus spins in the opposite direction from most planets. Its thick atmosphere traps in heat, making Venus the hottest planet in our solar system.

3rd planet from the Sun

EARTH
rock planet

Earth is our home planet! It's the only planet in our solar system with liquid water on its surface.

Earth's average temperature is 58°F, just right for supporting life!

4th planet from the Sun

MARS
rock planet

Mars is called the "Red Planet" because of its color, which comes from the rusted iron in its rocks.

5th planet from the Sun

JUPITER
gas planet

Jupiter is more than twice as massive as all the other planets in our solar system combined. The big red spot you see on it is a giant storm that has existed for more than 300 years.

6th planet from the Sun

SATURN
gas planet

Saturn is surrounded by beautiful rings that are made of ice and rock. The planet has 62 moons.

7th planet from the Sun

URANUS
gas planet

Uranus has 13 rings that we know of. It appears sideways because the planet actually rotates on its side!

8th planet from the Sun

NEPTUNE
gas planet

Neptune is the most distant planet in the solar system. It's dark, cold and windy. The winds on Neptune are faster than the fastest storms on Earth!
